Objective

Results-driven software developer in designing, developing, and implementing scalable applications. Seeking a challenging role at an innovative tech company where I can utilize my expertise in Java, Python, and cloud technologies to contribute to cutting-edge projects and drive business success.

Personal

- Gender: Male
- Date of birth: JULY 01, 2002
- Marital status: Single

Education

KAMARAJ COLLEGE, THOOTHUKUDI
Master Of Computer Application   *2025*
Completed

ADITANAR COLLEGE OF ARTS AND SCIENCE , TIRUCHENDUR
Bachelor of Computer Science   *2023*
7.79 CGPA

Experience

Fresher

POSTULATE INFO TECH PRIVATE LIMITED   *19 SEP 2024 - 25 SEP 2024*
Data Science intern

Skills

| Python | HTML5 | CSS | JavaScript | Figma | Photoshop | Data science |

| Data Analytics | Time Management | Adaptability | Creative Thinking |

| Team collaboration |

Project

Onine Driver Hiring System11
An online driver hiring system simplifies the process of hiring drivers for transportation services. It includes a driver application form for submitting personal and professional details, a driver history check for verifying records, and a management system for tracking and storing driver data. This streamlines and speeds up the hiring process for both drivers and managers.

Used Car resale using Deep Learning Techniques 11
With the rise in private car ownership and the used car market, accurate pricing of used cars has become crucial. Traditional methods depend heavily on subjective judgment and are unsuitable for online trading. This project builds a model using deep residual networks and a BILSTM framework to predict used car prices based on factors like mileage, age, fuel type, and engine size. The model processes data iteratively, refining predictions to achieve optimal performance. It will be integrated into a web app that notifies users of their product status.

Certification

MasterClass on Backend development 11
online master class on backend development held on 05 octoper 2024 hosted by Postulate
